Why should I be in the study?

We are doing a research study. We want to learn more about the factor products you take for your hemophilia.

What do I have to do?

You can say yes and join this study. Your doctor would like to collect some information about your health from your medical record in order to see if you will qualify for this study. Your doctor or nurse might ask you a few questions about your health. You do not have to answer any question you do not want to. If you join the study, you will come to clinic twice to have a factor dose. Then you will have your blood taken at different times on different days after your factor dose.

Will it hurt?

It will feel like a pinch when you give blood. It will hurt for a minute. Sometimes the place where the needle went in can be sore for a while or you might have a bruise for a few days.

How will it help?

This study will not help you. The things we learn from this study might help people with hemophilia.

Do I have to be in this study?

Your mother/father said it would be ok for you to participate in this research project. If you do not want to be a part of this research project, you will still get the same care that you have been getting. If you don't want to be in this study, that is okay. You can change your mind later if you want to stop.

Can I ask questions?

You may ask us any questions now that you want. If you think of a question, concern or complain later on if at any time you feel you have had a research-related injury or a reaction to the study drug, you can ask your parent. Your parent can call us to ask a question too.
